KAMM Engineering | MEPF Engineer

RBDG | Acoustical Engineer

Jensen Hughes | Life Safety

Mary Beth Northrup | Environmental

HLB Lighting | Lighting Consultant

Butter Construction | General Contractor

Robin Hill | Photography

“[Glavovic Studio] developed a pattern of linked ‘neighborhoods,’ where, like in a contemporary city, interaction and disruption is guaranteed to occur through the streets and nodes when people meet and greet,’ the firm states in a document describing its approach to the project. An interconnected non-linear geometry fosters and supports a strong creative culture at Magic Leap and is achieved with a spiral-shaped plan. Links and views between departments through pathways that are open work areas and open glass meeting spaces at various scales lead to a series of public gatherings spaces/nodes that include seating, eating, interactive opportunities as well as spaces where Magic Leap products are tested, used and explored.”
