USGBC Gala Verde Award Best Overall Project  
USGBC Gala Verde Award Best Project New Construction

"The facility's white reflective roof ever serves more than one purpose: not only to deflect the Florida sun, but also to serve as a collection surface in conjunction with a rainwater harvesting system. About 18,000 SQ FT of the roof's surface is used to collect rain. Calculations attest that with roughly 60 inches of rain per year - 540,000 gallons of rainwater will be available for use at YAA."

"Liquid Assets" by John Mesenbrink in **NET ZERO BUILDINGS**
